

23 strands GENEVAULT

WHOLE GENOME SEQUENCING SERVICE

Whole Human Genome Sequencing (WHGS) GeneVault service provides a comprehensive view of a person's genetic composition. This blood extraction, sequencing and secure storage provides on-demand and realtime access of the patients' big data including fastq, alignment and variant files, providing insights into current and future best suited medication and disease risk based on your DNA.

GENOME EMPOWERED CARE

Online Diagnostic Assessments & Knowledge Base

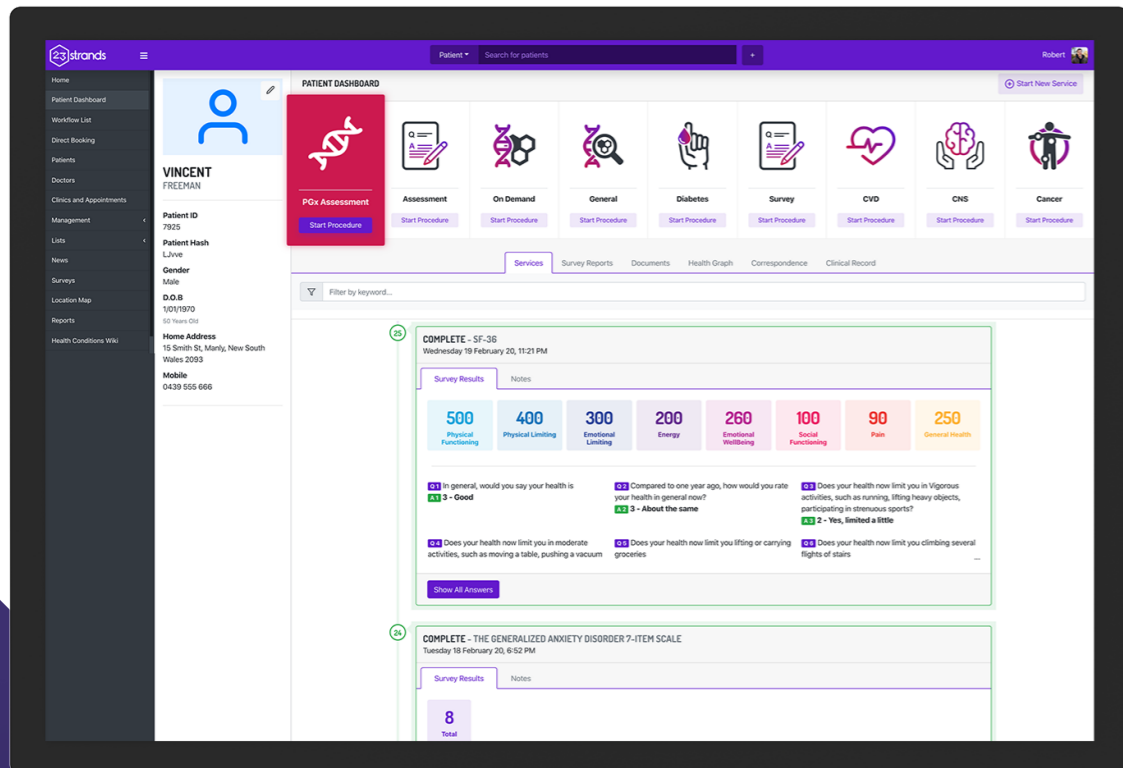

Medical Data Integration

Patients Like Me based approach to diagnosis, treatment & prognosis

Specialist Care Team Network

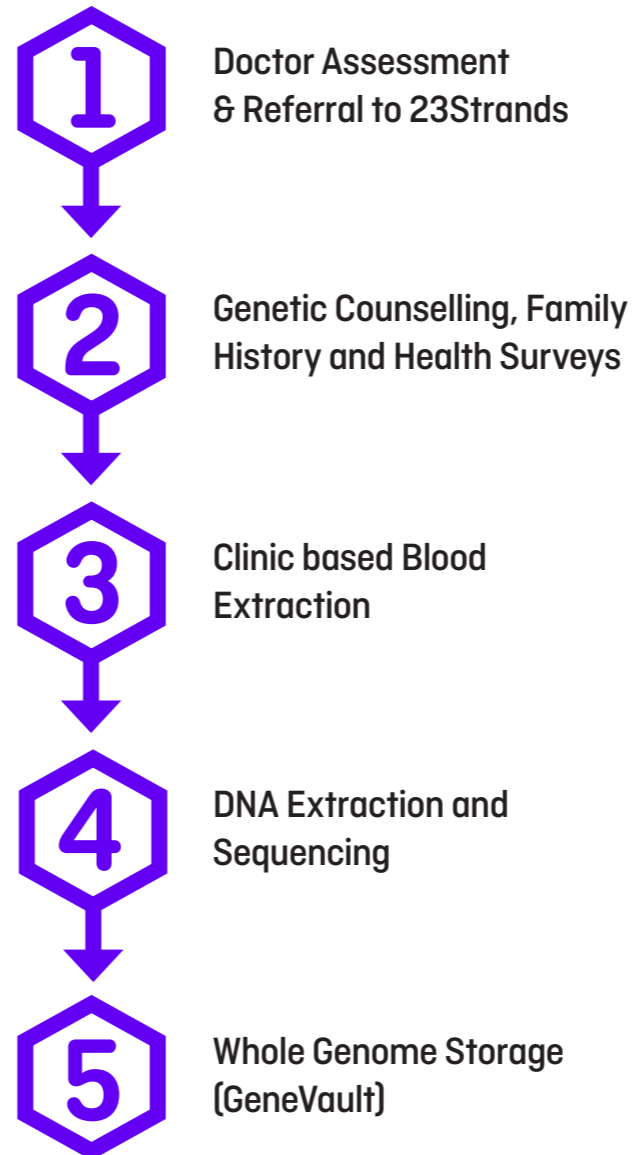

INTRODUCING 23STRANDS

23Strands is proud to offer a new way of genome and medical data driven informed medicine. Focusing on empowering clinicians with the latest scientific research in genomics we provide world class screening, streaming and monitoring of post diagnosis and treatment as well as healthcare co-ordination.

THE GENEVAULT PROCESS

Duration around 1.5 months.

WHY USE 23STRANDS?

23Strands has listened to industry leaders and clinicians and has developed a solution for empowering clinicians and patients to address current problems in delivering genome empowered medicine:

- Bank Vault approach to your private medical and Genomic Data
- Concierge service that helps navigate this complex industry
- Allow clinical teams focus on delivering the best quality of care
- Best in class solution for patient management over time
- Workflow driven pathways allowing for time reduction
- Peace of mind due to the use of top tier IT infrastructure
